# Registering Your Discrete Trial Trainer (2.0.5 or later)

The DT Trainer now has a much simpler internet based registration procedure. The simplest method is for directly connected systems via network or dial up phone line. The directly connected system is the computer where the DT Trainer is installed. If a direct connection is not available but you have access to another computer that is connected, then there is registration option where you will use a removable media like a floppy to complete the registration. Finally there is a phone option for customers that do not have any access to the internet.

To register, follow the steps below. You will need **DT Trainer 2.0.5** or later to support this feature. If you do not yet have this version, download the update from www.dttrainer.com/updates.html.

1. Obtain your Authorization Code. This may be on the front cover of your User's Guide. If you have purchased, and do not have your code, contact AES.
2. Select the Registration tab on the DT Trainer administration dialog.
3. Select your **DT Trainer Location** (School District, Institution, Home).
4. Complete the Location information.
5. Complete the Support Contact Information. This person should be the teacher, Parent, or other individual actively managing the DT Trainer for the students.
Note: All fields with an "*" are required.
6. Click **Register**.

7. Enter your **Authorization Code**.
8. If you have internet access by a network or dial up phone connection, then use the Connected tab registration option. Click **Process Registration**.*

Registering Your Discrete Trial Trainer (2.0.5 or later)

DT Trainer - Version 2.0.5 - Administration **Registration** To register, you need your Authorization Code. This may be on the front cover of your User's Manual. If you do not have this information, please contact AES. Authorization Code: AES-1000-68-1234 Customer ID: 1000 Machine Key: PRRJ-DE42-1LZI-5OLI-GA5Z-PRFM (Unique to this system) Select from one of the following registration methods. NOTE: Each system has a unique registration and therefore the activation key from one system will not work for another system. Connected | Not Connected | Phone This system is internet connected. This is... rrently connected to the internet via a dial up or network connection. Enter the infor... Registration" button. **Key OK** New Activation Key Accepted. OK Process Registration Done Come Back Later Exit	9. When you see **New Activation Key Accepted** dialog, your DT Trainer is registered and ready to use!
Connected | **Not Connected** | Phone This system is NOT internet connected but you have access to a system that is connected. This method will create a request file and copy that file and an exicutable file to a floppy or other removable media. Take the media to a web connected system and execute the AESProcessRequest.exe file. AESProcessRequest will get the activation key for this system and save it to the file. Then bring the media back to this system to processing from the file. Step 1: Generate Registration Files Step 2: Take the floppy or other media to a internet connected system. Step 3: Execute the AESProcessRequest file on the media from the internet connected system. Step 4: Return the removable media to this system. Step 5: Process Registration Done Come Back Later Connected | Not Connected | **Phone** If you do not have access to an internet connected system, or you are having problems with the other registration methods, then call us to register by phone: 803-233-0541. Activation Key: [ ] Process Registration Done Come Back Later	10. If your computer is not connected to the internet, select one of the other tabs and follow the onscreen instructions.

Note: These registration procedures replace those described in the 2.0.0 version of the DT Trainer User's Guide on pages 3-3 to 3-5.
