Research Based

- Extensive research shows video modeling increases acquisition rates across a wide variety of skills

Verifiable Results

- Collects data & provides reports to verify and track progress

Robust Activity Library

- Covers Academic, Communication, Social, Speech, Non Verbal Imitation, Self Help, and more!

Target Students

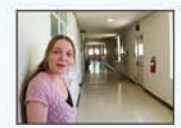

- Designed for individuals with autism
- Configurable for a wide range of individuals
- For students developmentally 2 to 9 years old
- Typically used with self-contained and resource classes, ABA-DT & VB programs, at risk students

Features

- Includes Task Analysis, Transitions from Video to Images, Transitions from Images to Text, Sequences, Forward and Back Chaining, and Visual Schedules
- User library: Create your own activities

Affordable

- Priced for use with a wide variety of students
- \$149 Home or Single Student
- \$349 Single Computer, Unlimited Students
- Includes 1 year of updates and support

Activity Trainer™ Product Information

Activity Trainer Overview: The Activity Trainer is a powerful software package that makes the research-based, video modeling teaching method practical for the classroom and home. The Activity Trainer is a versatile teaching tool that enables teachers to use videos to teach almost any targeted activity or skill - from simple to complex - and includes a library of activities with options to customize, modify, and create new activities. Video modeling has been shown in numerous studies to improve acquisition rates across a wide variety of tasks for individuals with autism and other learning disabilities. Unfortunately, because video modeling is a difficult process, few of our students are benefiting from this powerful teaching method. The Activity Trainer is the first tool designed specifically to make video modeling easy.

Free 30 Day Trials: Free 30 day trials are available by downloading from our web site www.dttrainer.com. The download is fairly large, and if you have problems downloading the trial you can request a trial CD. The CD can install any number of computers so you can pass it around to other teachers or parents.

Powerful Environment to Teach Skills: The videos can be used to teach new skills, and then transition the student to less supportive prompts like images or text. Prompts include Video, Images, Text, and Audio and can be tailored to meet individual learning needs and levels. The activity trainer allows you to play portions of the video, view images from the video, view related text, and hear associate alternate audio instructions. The video, images, text, and audio can be changed or tailored to accommodate individual student's needs. Activities can also contain one or more versions of printable worksheets.

Next Generation Video Modeling: The Activity Trainer takes Video Modeling to a new level of capability by allowing integration of video, audio, images, and text into predefined presentations.

Easy Enough for a Teaching Assistant, Parent, or Even a Student Mentor: Once student profiles are created on the AT, and activities are selected for the students, teaching skills is simply a few clicks away. No more scanning through videos to find the portion to play. The task analysis is already done so even a person not trained in task analysis (breaking down an activity into steps) can easily perform systematic teaching of complex tasks.

Data Collection: Data collection features allow the user to track student performance. The AT automatically collects the activity name, the prompt, when played, how long it took, and keeps a running total of plays. You can add the result and any associated notes during the trial or afterward.

Visual Schedules: Computer-based schedules for the student can be set up to help the student use newly learned activities. The Schedules allow the student to self-select activities and perform learned activities independently. A student's photo, icon, or symbol can easily be incorporated into the visual schedule. With the computerized schedule system, you can easily control how many times the student gets access to an activity and how many times the student can cycle through the entire schedule. You can also print the images to use with off-computer visual schedules.

Skills (Activities) Library: The Activity Trainer includes a library of ready-to-use activities and one year of updates and support. Customers can download additional activities for a year as part of the purchase. Most of the videos are filmed from the student perspective, which means the student does not have to translate the skill into their own perspective. This perspective allows a lower functioning student to learn the skill while also working for higher functioning students. We also model self talk, which allows the student to associate the appropriate language for the activity or step. The Activities Library covers areas: **Academic, Communication, Daily Living, Nonverbal Imitations, Recreation, Social, and Vocational**. See our web site for a current list of available activities.

User Library – Build Your Own Activities: The Activity Trainer has a User Library area for customers to create their own activities. Create activities ranging from simple videos that are played in full, to complex activities that include predefined task analysis and transitions from videos to images and text.

Complements Variety of Classrooms & Settings: The Activity Trainer complements a variety of school & home educational programs:

- Autism classes (ABA - DT & VB, TEACCH, eclectic, and other)
- Self-contained Intellectual Disabilities classes
- Home based ABA - DT & VB and eclectic programs
- At Risk 4 year old preschool, Head Start, Preschool Disabilities
- Regular education kindergarten and preschool classes
- Home schooling

Affordably Priced: The Activity Trainer is priced affordably so that it is a cost effective solution for a wide range of students, and not just the most expensive to educate. This is a large and robust package with one year of updates at a very modest price point. Our pricing is intended to help make the Activity Trainer a standard package in appropriate classrooms and home settings.

Training: The Activity Trainer comes with integrated training videos and web based training sessions are also available. You can view the integrated training videos from the videos tab under the main "?" help tab. You can also view screen specific videos from the "?" button on that screen or dialog.
